IN BRIEF

MetroCast launches new, faster Internet speeds

BELMONT — MetroCast Business Services (MBS) has launched new, business class Ethernet services that provide advanced fiber solutions for mid- and large-sized clients that require guaranteed speeds and dedicated, uninterrupted connectivity.

“MetroCast Ethernet services provide the scalability and flexibility that larger organizations need to handle the quick, secure transport of large amounts of data over a private network,” said MetroCast Senior Director of Business Services J.C. Calhoun. “Our robust, reliable, dedicated fiber-based solutions are tailored to meet even the most demanding bandwidth needs across the business, educational, healthcare, and governmental sectors.”

With Point-to-Point, Dedicated Internet Access, and Digital Trunk Service, MetroCast clients — whether at a single location or across multiple locations — now have highcapacity options that can be customized to the unique needs of organizations, regardless of size. Because the MetroCast Ethernet services are scalable, MetroCast is able to provide immediate solutions and service enhancements as organizational needs evolve and grow.

“MetroCast Ethernet services will provide organizations with a strong competitive edge through cost-effective solutions designed to increase productivity, improve efficiencies, and further critical organizational goals,” said Calhoun.
