Olsen joins Cybertron

BELMONT — Cybertron Technology Solutions has announced the addition of Rob Olsen to the team.

Olsen brings more than 10 years of experience in software and technical support, including close to seven years as a technical support engineer with Ecora Software.

OLSEN

Most recently, Olsen worked as the systems administrator at Genesis Behavioral Health where he managed all servers and networks spanning the agency's four offices.

He studied Computer Science and Marketing at Franklin Pierce College.

Tracey Rich, vice-president and senior network engineer for the company said, "We're very happy to have Rob join our team. His extensive knowledge and experience, coupled with his warm personality, make him a perfect fit for our company."

With offices in Belmont and Rye, Cybertron, which went into business eight years ago, manages the IT infrastructure for businesses all over the state of New Hampshire. The staff at Cybertron can help clients keep current systems and equipment running by working on and rebuilding what they already have in place, avoiding frequent and excessive replacement costs.

"Anyone can advise you to buy new equipment, but not all IT companies can work on your equipment and keep it up-to-date," said Rich.

Originally from Barrington, Olsen currently resides in Laconia. He enjoys fishing, motorcycle riding, traveling, camping, hiking, and spending time with his two sons and family.
